

How to Maintain Your CQUARTZ Coated Vehicle

*****Washing regularly is the most important item.*****

1. Immediately following installation - Keep clean and free of mineral / water spots for 48 hours.
 2. Do not wash with soap for 5 days unless needed to remove bugs.
3. Wash with CARPRO RESET or **CJ Gray Soap regularly**. Other soaps can leave residue that temporarily messes up the beading and allows dust and dirt to stick more readily. Finish With **CARPRO hydrofoam** for added layer of protection.
4. Wash Mitt: **Microfiber Madness Incredimitt** (Recommended for daily drivers and most cars - This mitt is easiest to maintain and is extremely durable as well as washing out most easily)
 5. Drying Towel: **CARPRO Drying Towel or CJ Gray Drying Towel**
 6. Quick Detailing
 - **CJ Blue Spray** and Orange/ Blue Microfiber towels (need about 3-6 towels)
7. Occasionally (every 3 to 6 months) decontaminate the surface with **CarPro IronX**. Use during the wash cycle (after Reset) and as directed. Can also apply CJ Wheel Cleaner/Iron X for deeper wheel cleaning with wheel barrel brushes if barrels are visible.
8. If you would like to use a topper, use **CARPRO Reload, CJ Ceramic Spray, or CJ Blue Detailer** as topper: use every 3-12 months, for special occasions or any time you like.

IMPORTANT Precautions:

A.- Avoid sprinkler and hard tap water (If your vehicle is subjected to this and it is not removed in the regular wash cycle then use CARPRO Spotless and MF towel.)

B.- Remove bird bombs from vehicle surfaces immediately (CJ Blue Detailer + MF towel)

CarPro Iron X (use every 3-12 months)

CarPro Iron X advanced pH-balanced formula safely breaks down ferrous metallic contamination caused by automotive brakes, rail dust, and construction from delicate vehicle surfaces. It can be used on paint, plastic, chrome, glass, and alloy wheels. Iron-X works by forming a water-soluble complex with the iron particles lodged in the surface, allowing them to be rinsed free, and cleaning deeper and more safely than washing or claying.

1. Use outside with sufficient ventilation (Rinse driveway regularly during use)
2. Wash the vehicle in the shade with Reset and rinse well
3. Shake the bottle of Iron X, then across the surface
4. Allow the product to dwell for approximately 3-4 minutes in the shade Do not allow it to dry on the surface
5. Thoroughly rinse the surface and gently mitt with Reset once more
6. Rinse and dry surface gently and thoroughly

CarPro Spotless (If Needed); chemically breaks down the mineral deposits left behind by water droplets (Otherwise known as 'water spots') before they can etch into the finish, thus negating the need for time consuming abrasive correction, and prolonging the life of the paint. If left unattended, water spotting can cause permanent damage to the most resilient of vehicle surfaces. Spotless's proprietary blend of carefully balanced gentle acids safely removes heavy mineral deposits on most vehicle surfaces.
